

## BF10 Bag Flattening Incline Conveyor

10 foot, 15° inclined conveyor with an opposed 5½ foot long conveyor.

With timed gear motors and parallel linkage conveyor assemblies to remove trapped air and flatten bags for manual or automatic stacking.

Three Phase – 110 feet per minute. 12 inch inlet and 42 inch discharge heights are standard.

Designed to flatten bags to be palletted with more precision.

Bags that have been flattened tend to make pallets squarer, hold together better and have less freight damage than pallets with un-flattened bags.
